

Does your career need **re-tooling to meet today's demands?**

Re-Tooling with an M.A. in Economics

Engineers, scientists, and health professionals have many of the skills necessary to excel in an Economics M.A. Program. They generally have rich mathematical and statistical expertise that will enable them to “leapfrog” many of the standard M.A. qualification requirements. With as few as 8 to no more than 11 courses, they can work toward an M.A. degree in Economics over a twelve to eighteen month course of study.

For more information, contact the Director of the M.A. Program, Professor Allen C. Goodman, at (313) 577-3235, or allen.goodman@wayne.edu.
